MFG Galileo Selected by Spanish Air Force for Radome Contract

SPARKS, NV (April 30, 2008) --- MFG Galileo Composites, a leading specialist in the design and manufacturing of custom composite radomes and reflectors, announced that it has been selected by the Spanish Air Force through EMTE Sistemas to supply six 77-foot radomes. The first two radomes are scheduled for delivery in 2008, with the remaining four in quantities of two in 2009 and 2010, respectively.

MFG Galileo Composites is ISO 9001:2000 certified and has produced more than 500 radomes for mission critical sites supporting military, space and scientific programs around the globe. The company's radome design and manufacturing techniques have been proven in the harshest environments on the planet for surveillance, air traffic control, weather radar, SATCOM, earth observation, and telemetry applications.

EMTE Sistemas is a system integrator based in Barcelona, Spain with an established market presence in the design, installation and maintenance of air traffic control systems, tactical and strategic radio communications, radar location and surveillance systems, control systems, and cryptography.

“This new contract marks the first installation in Spain and our first partnership with EMTE Sistemas, two significant events for our company,” said Clint Lackey, General Manager, MFG Galileo Composites. “We are looking forward to building our business relationship with EMTE Sistemas and working together on this initial project.”

MFG Galileo Composites, formerly known as MFG Ratech, underwent a major reorganization in 2007. Along with the new name and management structure, the company has invested considerable internal R&D resources into advanced concepts in the design and engineering of composite ground-based radomes.

MFG Galileo Composites is a wholly owned entity of the Molded Fiber Glass Companies (MFG), a leading composites manufacturing specialist with operations in the US and Mexico. MFG has a long and rich heritage of pioneering the use of composites in many different industries including automobiles, trucks, wind energy, water treatment products, protective safety equipment, and construction.

About MFG Galileo Composites

MFG Galileo Composites is a specialized radome engineering and manufacturing company with an unmatched composites engineering capability. As the only specialist in the design and manufacturing of composite radomes that is part of a larger corporation devoted to advanced composites manufacturing and supported by a dedicated materials research entity , MFG Galileo provides the most highly researched, engineered and tested products on the market today.

With a track record of success partnering with the most respected organizations in the industry, MFG Galileo delivers technology leadership, a commitment to innovation and superior customer service. For more information, visit www.mfggalileo.com.

About Molded Fiber Glass Companies

Molded Fiber Glass is a leading composites manufacturing specialist with operations in the US and Mexico, and a rich heritage of pioneering the use of composites in many different industries including automobiles, trucks, wind energy, water treatment products, protective safety equipment, military, communications and construction.

Founded in 1948, MFG is a recognized leader in the composites industry, producing parts and assemblies for Fortune 500 companies, including General Electric, Paccar and General Motors. The privately owned corporation is headquartered in Ashtabula, OH with manufacturing facilities in 10 states. Web site: <http://www.moldedfiberglass.com>.
